SUMMARY

Software Engineer with 2+ years of experience building and shipping real-time web applications in C#, used by 1,000+ daily users across 10+ production titles. Cut build sizes by up to 80% to meet low-end mobile targets, and designed a reusable localization package that reduced language rollout from one week to one day. Experienced with client-server integration over REST and WebSockets, MVC/MVVM architecture, CI/CD pipelines, and AI-assisted development. Mentored interns in a remote, Agile team.

SKILLS

- **Languages:** C#, JavaScript
- **Architecture:** OOP, MVC, MVVM, SOLID, clean code
- **Networking:** REST APIs, WebSockets, real-time client-server communication
- **Frontend & Web:** WebGL, React, Vite, responsive UI
- **DevOps & Tools:** Git, GitHub, CI/CD, build pipelines, Visual Studio
- **Engines & Libraries:** Unity, DOTween, Spine, TextMeshPro
- **AI Tools:** Claude Code, ChatGPT, Codex
- **Practices:** Agile/Scrum, code review, mentoring, performance optimization

EXPERIENCE

Software Engineer (Unity Developer, promoted Junior → Mid-Level)

Opa Games | opagames.com | Olinda, PE, Brazil (Hybrid) | May 2024 – Sep 2026

- Built and maintained 10+ real-time web games in C#/Unity (WebGL), serving 1,000+ daily users in a 6-person engineering team.
- Reduced WebGL build sizes from 100–150 MB to 20–30 MB (up to 80% smaller) so games could run on mobile devices with 3 GB of RAM in the browser.
- Designed and built FineLocalization, a reusable localization package with CSV-driven tables and runtime updates; adopted across all company titles, cutting the time to add a new language from one week to one day.
- Implemented client-server communication over REST APIs and WebSockets, including connection lifecycle and error handling (disconnect, reconnect, server commands) in an SDK-style protocol shared by every title.
- Structured game clients with MVC and MVVM patterns to keep UI, state, and networking logic decoupled and reusable across projects.
- Shipped releases through CI/CD build pipelines and took part in sprint planning, code reviews, and design reviews under NDA.
- Mentored 3 interns as technical lead in an internal program that onboarded new developers into the team.
- Promoted from Junior to Mid-Level based on technical contribution and project ownership.

PROJECTS

- **FineLocalization** – Open-source Unity package for multi-language support: CSV tables, runtime download for WebGL/mobile/desktop, TextMeshPro support, and automatic fallback for missing keys. github.com/NoTaskStudios/com.notask.finelocalization
- **Personal Portfolio** – Portfolio website built with React and Vite, deployed with GitHub Pages. davy04.github.io/Portfolio-Website
- **BULLET CRASH** – 2D bullet-heaven game in Unity/C#, developed from a full design document, with main menu, HUD, level-up, and game-over systems. davy04.itch.io/bullet-crash

EDUCATION

- **Postgraduate in Software Engineering** – PUC Minas | 2026 – 2027 (in progress)
- **BSc in Computer Science** – Uninassau | 2022 – 2025
